

FREE REPORT # 5

AstraGin™ IS OUR SECRET INGREDIENT TO HELP MAKE ARTERY DETOX THE BEST TOTAL-BODY-NUTRITIONAL-SUPPLEMENT AVAILABLE TODAY

AstraGin™ is the first and only natural food ingredient that has shown in cell, animal, and human studies to significantly improve the absorption of many essential life supporting and health promoting nutrients, such as amino acids, glucose and vitamins into human cells. By allowing a greater amount of these nutrients to pass from the blood stream into the cells, AstraGin™ provides for truly improved bio-availability and hence improvement in overall health, fitness, energy, endurance, sense of well being, blood sugar balance and lean body mass.

AstraGin™ is the perfect food and nutraceutical ingredient to be included in human and pet foods as a dietary supplement.

AstraGin™ is a proprietary, all natural plant based formulation, derived from highly purified Panax notoginseng and Astragalus membranaceus using the most advanced pharmaceutical grade extraction and technology processes available today.

AstraGin™ increases chemicals in the human body called “transporters” and “mRNA”. These chemicals determine how much or less specific nutrients are absorbed into the intestinal cells and thus are available to support and promote our health and well being.

AstraGin™ is Gluten Free, GMO Free, Lactose Free, Sugar Free, Animal Free, Sodium Free and has no preservatives or artificial ingredients.

AstraGin™ is a proprietary, all natural plant based formulation derived from highly purified Panaxnotoginseng and Astragalus membranceus, using pharmaceutical grade extraction and processing technology.

AstraGin™ increases chemicals in the human body called “transporter” and “mRNA”. These chemicals determine how much or how little specific nutrients are absorbed into the intestinal cells and thus are available to support and promote our health and well being.

ADVANTAGES

AstraGin™ is clinically proven to:

Increase amino acid absorption by 62%

Increase vitamin absorption by 50%

Increase glucose absorption by 57%

Increase insulin sensitivity by 38%

Increase ATP production by 18%

Decrease blood sugar by 19%

Increase glycogen in muscle (24 hours after strenuous exercise) by 60%
